Weighted forecast

from open pipeline

- Top priorities for management
- 2,867 open leads (79.2%) have had no activity in 30+ days — ₹202.3 Cr stuck with no recent touch.
 - 2,712 open leads (74.9%) have an overdue follow-up date; another 520 (14.4%) have none scheduled at all.
 - 66.6% of open leads are 90+ days old (₹169.0 Cr) — ageing pipeline, not fresh flow.
 - East region converts worst (11.4% won, 18.2% lost) — review before further campaign spend there.
 - Noida (7.8%) and Pune (9.3%) convert far below the 12.8% average, despite Pune being a top-5 volume city.
 - No decline-reason field exists in this data — add one so Lost leads can be diagnosed, not just counted.

1. Funnel: Lead → Opportunity → Won

Exited as Lost: 741 leads (14.8%), ₹54.9 Cr — not shown in the funnel above since they leave the pipeline.

- Findings
- 849 leads (17.0%) are still "New" — not yet worked into a qualified opportunity.
 - Of the 4,151 opportunities, only 15.4% close Won; 17.9% are Lost, 66.8% are still active.
 - Probability_% is fixed per stage (New 10%, Qualified 25%, Proposal 50%, Negotiation 75%, Won 100%) — it reflects stage, not deal-specific risk.
 - Weighted (probability-adjusted) forecast on the ₹257.8 Cr open pipeline is ₹94.9 Cr (36.8%) — a more realistic expected close value than the raw pipeline.

- Actions
- Push the 849 New leads to a qualification call within 3 days.
 - Report the ₹94.9 Cr weighted forecast to leadership, not the raw ₹257.8 Cr.
 - Set stage-exit SLAs (e.g. Proposal → Negotiation within 21 days) to stop stage stalling.

2. Campaigns and lead sources

Campaign: won% vs lost% (bubble = pipeline value)

Lead source: leads and won %

Findings

- **Website Organic** is the largest campaign (749 leads, ₹52.7 Cr) but converts worst: **11.6% won, 17.8% lost**.
- **Partner Connect** and **Digital Outreach** perform best — highest won%, lowest lost%, and the two biggest won values (₹7.3 Cr, ₹6.8 Cr).
- By source, **Partner** has the best won rate (15.0%) but also a high lost rate (16.0%) — inconsistent quality.
- **Event** is the smallest and weakest source (10.4% won) — lowest return per lead.

Actions

- Shift budget from Website Organic and Event toward Partner Connect and Digital Outreach.
- Audit Website Organic form-fill quality — high volume, high loss suggests weak intent capture.
- Set a quality bar (min. designation/company size) for Partner-sourced leads before assignment.

3. Activity & follow-up health

Open leads: follow-up status (each square = 1%)

Open leads: days since last activity

Findings

- **2,867 of 3,621 open leads (79.2%) have had no activity for 30+ days** — ₹202.3 Cr sitting untouched.
- **2,453 (67.7%) have had no activity for 60+ days** — this is stale pipeline, not a short lag.
- Only **150 leads (3.0%)** never received any activity beyond creation — reps are logging activity, they are just not following through on next steps.
- Activity behaviour is even across all 10 reps (95–98% "touched", 170–207 open leads each with no next follow-up) — this is a **process gap, not a rep-specific one**.

Actions

- Make "Next Follow-up Date" mandatory at every stage change — 520 leads currently have none.
- Auto-flag any lead untouched for 30+ days to the sales manager (would catch 2,867 leads today).
- Weekly overdue-follow-up report per rep; today every rep carries 170–207 overdue leads.

4. Region-wise analysis

Leads and outcomes by region

■ Won ■ Lost ■ Open

Won % vs lost % by region

Findings

- **West** is the largest region (29.8% of leads, ₹106.1 Cr) and also converts well (13.7% won).
- **East is the weakest region:** lowest won rate (11.4%) and highest lost rate (18.2%), on the smallest volume.
- North has the largest volume after West but a below-average won rate (11.7%).

Actions

- Review East region campaigns and rep coverage — 18.2% loss rate is 3.4 points above average.
- Study what West and Central reps do differently and share it with North and East teams.

5. City-wise analysis

City	Region	Leads	Won %	Lost %	Value
Surat	West	302	12.6%	15.6%	₹21.4 Cr
Nashik	West	302	16.6%	14.2%	₹21.3 Cr
Mumbai	West	301	15.3%	12.0%	₹22.2 Cr
Ahmedabad	West	296	14.5%	14.9%	₹20.0 Cr
Pune	West	290	9.3%	14.1%	₹21.2 Cr
Jaipur	North	219	11.4%	12.3%	₹15.7 Cr
Noida	North	206	7.8%	16.0%	₹13.4 Cr
Delhi	North	204	14.2%	12.7%	₹14.2 Cr
Chandigarh	North	197	13.7%	19.3%	₹16.5 Cr
Gurugram	North	194	11.3%	13.4%	₹12.8 Cr
Kochi	South	189	10.1%	10.6%	₹13.4 Cr
Nagpur	Central	187	16.6%	12.3%	₹12.9 Cr
Chennai	South	186	14.5%	14.0%	₹13.8 Cr
Bhopal	Central	175	10.9%	14.9%	₹13.6 Cr
Coimbatore	South	169	10.1%	14.8%	₹11.5 Cr
Jabalpur	Central	168	10.7%	15.5%	₹11.3 Cr
Hyderabad	South	167	13.8%	15.6%	₹13.2 Cr
Bengaluru	South	164	15.9%	15.2%	₹12.0 Cr
Raipur	Central	161	15.5%	13.0%	₹11.4 Cr
Ranchi	East	160	11.3%	16.9%	₹11.0 Cr
Patna	East	158	12.7%	18.4%	₹11.3 Cr
Bhubaneswar	East	155	11.0%	18.1%	₹11.6 Cr
Indore	Central	153	14.4%	14.4%	₹10.6 Cr
Kolkata	East	150	13.3%	17.3%	₹10.5 Cr
Guwahati	East	147	8.8%	20.4%	₹9.6 Cr

Green = higher won %, red = higher lost %. All 25 cities shown, sorted by lead volume.

Findings

- Top 5 cities by volume — Surat, Nashik, Mumbai, Ahmedabad, Pune — are **all in West** and total 29.8% of all leads.
- **Pune stands out as a problem:** 4th-largest city (290 leads) but only 9.3% won — well below its own region's 13.7% average.
- **Noida (7.8%) and Guwahati (8.8%)** have the lowest won rates of any city.
- **Guwahati (20.4%), Chandigarh (19.3%) and Patna (18.4%)** have the highest lost rates.

Actions

- Investigate Pune specifically — same region as top performers, but underperforming.
- Prioritise coaching or lead-quality review in Noida, Guwahati and Chandigarh.

6. Ageing of the pipeline

Open leads by age (days since creation)

Value tied up by age band

Findings

- **66.6% of open leads (2,409) are older than 90 days**, holding **₹169.0 Cr** — over half the open pipeline value.
- Only **11.1% of open leads are under 30 days old** — the pipeline is dominated by ageing leads, not fresh ones.
- Combined with section 3: most of this aged pipeline is also the stalled, no-recent-activity pipeline — the same leads show up in both.

Actions

- Force a decision (Won/Lost/re-qualify) on every lead older than 180 days (1,248 leads, ₹90.6 Cr) within 2 weeks.
- Track "pipeline age mix" monthly — target under 40% of leads older than 90 days.

7. Conversion by value (₹)

Pipeline value by outcome

Won % / Lost % by deal size

■ Won: ₹43.8 Cr (12.3%) ■ Lost: ₹54.9 Cr (15.4%) ■ Open: ₹257.8 Cr (72.3%)

Findings

- Won value is **12.3%** of total pipeline value — almost identical to the 12.8% won by lead count, so deal size does not skew the headline number.
- **Bigger deals convert worse:** won rate falls from 13.8% (under ₹3L) to 11.7% (₹15-25L); lost rate rises from 14.8% to 16.8% over the same range.
- Value-weighted, the opportunity-stage win rate is **14.8%** ($\text{Won} \div (\text{Total} - \text{New value})$), close to the 15.4% count-based rate.

Actions

- Route deals above ₹10L to a senior rep or add manager involvement at Proposal stage.
- Track win rate by deal-size band monthly, not just overall.

8. Declined (Lost) leads and opportunities

Lost leads by region

West		211 · 28.5%
North		150 · 20.2%
East		140 · 18.9%
South		122 · 16.5%
Central		118 · 15.9%

Lost leads by campaign

Website Organic		133 · 17.8% of its leads
LinkedIn Outreach		116 · 16.1%
Customer Referral		108 · 15.1%
Trade Expo		101 · 14.8%
Industrial Growth		99 · 13.8%
Partner Connect		95 · 13.4%
Digital Outreach		89 · 12.6%

Findings

- **No decline-reason field exists in this dataset** — Lost leads carry a status but no "why". This limits root-cause analysis; the breakdowns below are the best available proxies.
- Lost leads take about as long to close as Won ones (mean 66.7 vs 66.2 days) — **cycle time alone does not predict loss**.
- Loss rate rises with deal size (14.8% under ₹3L → 16.8% at ₹15–25L, section 7) — bigger deals are the highest-value leak.
- **West has the most lost leads in absolute terms (211)** simply due to volume, but **East has the highest loss rate (18.2%)** — a rate problem, not a volume one.
- Website Organic contributes the most lost leads (133) of any campaign.

Actions

- Add a mandatory "Loss Reason" field (e.g. price, timing, competitor, no budget, unresponsive) before a lead can be marked Lost.
- Once reasons exist, re-run this section — right now Lost can only be sliced by region/campaign/value, not by cause.
- Give large (₹10L+) at-risk deals a second-touch review before they are marked Lost.

9. Sales team and other findings

Won value by rep (₹ Cr)

Neha P. Karan J. Aarav S. Maya I. Sneha K. Isha N. Vikram R. Aditya S. Rohan M. Pooja D.

Leads created per month

Findings

- **Isha Nair** has the best won rate (15.2%) but **Neha Patil** brings in the most won value (₹5.65 Cr) — rate and value leaders are different people.
- **Rohan Mehta** has both the lowest won rate (11.5%) and low won value (₹3.75 Cr).
- Monthly lead volume is stable (478–605/month); win rate holds around 13% every month — **no seasonal spike or decline**.
- **114 customers (229 leads) recur** in the data — repeat engagement worth tracking separately as a warmer segment.
- **Industry:** Education converts best (14.1% won); Construction has the highest loss rate (16.3%).
- **Segment:** SME is the largest segment (44.7% of leads, best won rate 13.1%); Enterprise deals are fewer but far larger (₹156.7 Cr, 43.9% of value).

Actions

- Pair Isha Nair (best rate) and Neha Patil (best value) to mentor lower-performing reps.
- Track repeat customers (114) as a separate fast-track segment with a shorter follow-up cycle.
- Give Construction-sector deals an extra qualification step given their high loss rate.

Definitions and notes

- Converted to Opportunity = any stage beyond "New" (Qualified, Proposal, Negotiation, Won, Lost).
- Open pipeline = Qualified + Proposal + Negotiation (still active). Won = Sales Order closed. Lost = declined, exits the pipeline.
- Value/"quantity" = Opportunity_Value_INR, shown in ₹ Crore (1 Cr = ₹1,00,00,000).
- Weighted forecast = value × Probability_% for each open stage, summed.
- Activity = any entry in Last_Activity_Date/Next_Followup_Date. "Stalled" = no activity in 30+/60+ days as of 30 Sep 2026 (the data's latest date). "Overdue" = Next Follow-up Date before 30 Sep 2026.
- This dataset has no Loss Reason field, unlike a typical CRM — see section 8.
- Analysis covers all 5,000 leads, created 1 Jan - 30 Sep 2026.
